

Table 11.10 from (2012KE01):  $^{11}\text{Li}$   $\beta$ -decay scheme deduced in (2004FY01)

$\beta$ -decay to $^{11}\text{Be}^*$ (MeV)	Branching ratio to <sup>a</sup> $^{11}\text{Be}$ excited states (%)	$^{11}\text{Be}$ n-decay to $^{10}\text{Be}$ (MeV)	Branching ratio (%)
0.320	$6.3 \pm 0.6$		
3.96(+3.88)	$7.5 \pm 1.1$	3.368	$7.5 \pm 1.1$
5.85	$6.6 \pm 1.3$	3.368	$6.6 \pm 1.3$
8.82	$8.0 \pm$	5.958	$6.45 \pm 0.30$
		6.265	$1.47 \pm 0.25$
9.6-10.0	$8.0 \pm 1.5$	3.368	$8.0 \pm 1.5$
11-16	$3.5 \pm 0.8$	5.960	$3.5 \pm 0.8$
13.5-16	$1.15 \pm 0.1$	5.958	$1.15 \pm 0.1$
13.5-20	$1.38 \pm 0.25$	6.179	$1.38 \pm 0.25$

<sup>a</sup> Branching ratios renormalized to give  $I(^{10}\text{Be}^*(3.368 \rightarrow 0)) = 33\%$  as in (1997MO35).
