^b $\Gamma_{\text{rad}} \equiv \Gamma_\gamma + \Gamma_\pi$.

^c Based on $\Gamma = 34 \pm 5 \text{ keV}$: [Table 12.6](#).

^d The branching ratios for the $12.71 \rightarrow 4.44$ and $12.71 \rightarrow 0$ transitions are $(13.0 \pm 1.4)\%$ and $(87.0 \pm 1.4)\%$, respectively ([1977AD02](#)).

^e Assuming $\Gamma_\alpha + \Gamma_{\gamma_0} + \Gamma_{\gamma_1} = \Gamma$.

^f Based on Γ_{γ_0} of ([1983DE53](#)) and on branching ratios of ([1972AL03](#)): $^{12}\text{C}^*(15.11) \rightarrow ^{12}\text{C}^*(0, 4.4, 7.65, 12.71)$ are (92 ± 2) , (2.3 ± 0.3) , (2.6 ± 0.7) and $(1.4 \pm 0.4)\%$, respectively. In addition, an undetected branching of 1.6% to $^{12}\text{C}^*(10.3)$ is indicated by the β -decay work ([1972AL03](#)). See also ([1980AJ01](#)).
