C = capturing state.

^a See also [Tables 15.13 in \(1981AJ01, 1986AJ01\)](#) for earlier references, comments and reports. The previously reported transition to $^{15}\text{N}^*(9.76)$ has not been confirmed: $I_\gamma < 0.01\%$ (T.J. Kennett, private communication). ([1990WA22](#)) [see [footnote ^b in Table 15.4](#)] recommends different values for E_γ and E_x .

^b Error in Q_m not included. Adjustments due to it require the addition in quadrature of the Q_m error: see ([1986KE14](#)).

^c In units of photons/100 captures ([1986KE14](#)): errors are statistical only but these are predominant.
